Send picture and sound by email when detect intruders
APP can be downloaded from App Store

Long-term trip
traveling abroad

SoundWatch

Don't you have a smart phone which hasn't been used in your house?

Please connect the smart phone to a outlet and wireless LAN, then you can build a home security system by DIY.

Cariya's home security 'SoundWatch' lets you know immediately what's happening by email, to the email address you have registered in advance, accompanied by a sound, a picture and a video if a motion sensor alarm (◻) or a vibration sensor alarm (◻) detects detect intrudes and emits a loud warning sound.

You don't need to worry that the security company might know our patterns of going out. Cariya's 'SoundWatch' is safe and the best solution because such pattern can be inferred from the monitoring start/release information and the information does not go through a third party such as a security company.

In addition, this app is also possible to open to utilization in various ways as DIY parts. Please inform us your cases of DIY and please feel free to ask when you have problems with DIY.

Contact / consultation: soundwatchdog@cariya.jp

(◻) You should be able to buy them in your local DIY center, or through the internet.

You can get 'SoundWatch' by \$7.99 at App Store / Google Play.
